Senior Data Analyst

Hackney, London

We’re on a mission to make millions of children around the world more curious, clever and kind.

How? By combining the power of enchanting stories and stunning illustrations with the possibilities of technology, to create magical, personalised experiences for kids.

Started as a pet project by three dads and one uncle, our first product – the Lost My Name book – has sold over 600,000 copies worldwide. Now backed by Google Ventures among other leading investors, we’re embarking on an exciting journey to make bedtime more magical for children all around the world – and we’re looking for a seriously brilliant (and very, very nice) Senior Data Analyst to join our team.

You’ll need to love numbers and analysing great big piles of data. In fact: you’ll literally live and breathe data. You’ll need to combine this with an inquisitive ability to ask the right questions, and interpret data in a real-world context with a commercial angle – to help us get a better understanding of our customers and our business.

This role would suit someone with some relevant experience looking to make a step up. You’ll be well supported by senior colleagues with great BI experience, but you’ll be expected to take the lead on a day to day basis and take responsibility for your work.

You will ideally have had experience working in high growth an e-commerce business, and you will be passionate about the potential of using data to help us gain a better understanding of our customers. We are building a data team that is integral to the whole business and this is a fantastic opportunity for someone to be involved very early in this journey and grow as the company expands.

Requirements

- Strong SQL skills, ideally with experience of working with a Postgres SQL database
- Demonstrable professional experience in data analysis or data science
- A degree in science, mathematics, technology, engineering or similar discipline with outstanding numeracy and analytical skills with fine attention to detail
- As well as being comfortable writing complex SQL scripts, knowing your way around Google Analytics and have general Excel wizardry at your fingertips
- A good communicator with ability to explain detailed, technical & commercial insights clearly and concisely to engineers and marketing teams alike
- Analytical, inquisitive and forward thinking
- Clever, curious and kind
- An obsessive learner

Nice to haves

- Wide and deep experience of complex data structures and large data stores working with API 's
- Experience in statistical modelling
- Experience in machine learning
- Experience working in a start-up environment

**Benefits**

- Competitive salary and a real stake in the business – you'll share our success
- Be part of a fast growing company creating products that are really loved by customers all round the world
- Friendly, light filled studio in East London packed full of smart, hard working people to work with
- Manage your own work as part of a small, tightly knit team
- Flexible office hours
- Awesome BUPA healthcare for you and your whole family
- Training budget of £1000: we'll sponsor any conference you want to attend or speak at. – Travel the world and share your knowledge on us!
- Delicious team lunch every week
