B2B International is a growing international market research company that requires a graduate Statistical Research Executive for its busy headquarters in South Manchester.

The role covers all aspects of market research including project design, questionnaire design, analysis and reporting/presentation. As the primary responsibility of the role, the successful applicant will be expected to carry out analysis on large quantitative datasets from an array of different research projects. This will involve examining trends in the data, applying statistical techniques and modelling and offering recommendations based on the findings.

Applicants will be expected to have an undergraduate degree in a numeric or scientific discipline. A core specialism in mathematics or statistics is considered to be strongly advantageous. The successful candidate must have demonstrable experience of using statistical techniques or statistical modelling as part of their academic studies.

Salary: £18,000 – £25,000, depending on skills and experience, plus benefits

**Desired Skills and Experience**

Successful applicants will be expected to demonstrate the following skills at the interview stage:

- Experience of using software packages to analyse data, such as SPSS
- A high level of numeracy and an understanding of statistical techniques
- A good level of written English
- Strong proficiency within Microsoft Office, particularly PowerPoint and Excel
- The ability to think analytically and develop analytical solutions to problems
- Excellent problem solving skills
- A strong appetite for self-learning
- Strong interpersonal and presentational skills
- The ability to organise workload and work to tight deadlines
