Data Scientist

Momentum LLC; Carmel, IN

Who should read this?

This position will be of particular interest to individuals with very strong *mathematical modeling* skills! And, for those individuals who seek to join a state-of-the-art organization which values data science and offers a career path in that field.

Why is this position especially attractive?

This is a major corporation which values analytics, and in fact relies on analytics for decision-making and to drive the business forward. As such, you will interface at the executive levels to determine business needs and desired metrics.

The roles are part of the national corporation’s Data Science team, with peers similarly supporting other divisions of the corporation. This provides you with peers with whom you can brainstorm; a career path upwards through the Data Science team; and possible future advancement. In addition, there is extremely competitive pay; excellent benefits; a very modern work environment; and challenging tasks.

Who should apply?

We are seeking individuals with:

- Masters or PhD level knowledge in Mathematics, Econometrics, or Statistical Analysis, with a strong background in applied mathematics
- Experience creating forecasting models and quantitative analytics
- Knowledge of advanced optimization techniques
- Individuals with a passion for applying predictive and prescriptive models to real-world business issues

How you will spend your time:

The application of data science to the business is embraced at the highest levels in the company. Your responsibilities will include:

- Work with executive teams to determine relevant needs
- Determine the needed tools and approaches for solving problems
- As needed, research and recommend methodologies and approaches
- Design and implement the models and algorithms that achieve the desired results
- Oversee the implementation of projects
- Projects are focused in areas such as risk analysis, predictive modeling, etc.
