Statistics Officer, Department of Communications

Canberra, Australia

We are the Australian Government's pre-eminent adviser on communications. We develop policy, advice and initiatives that help all Australians realise the full potential of digital technologies and communication services.

The Bureau of Communications Research provides economic and statistical research and analysis to inform policy development and publish authoritative and easy to digest information on developments across the communications and digital technology sectors.

The Statistical Analysis section provides strategic authoritative statistical and research analysis using a range of mediums for internal and external use. Our analysis provides expert advice to inform BCR, the broader department, and external stakeholders. We are responsible for building the statistical capability in the department and we are the department’s representative on inter-agency statistics forums.

As a Statistics Officer you will progress elements of the statistics work program, including synthesising existing public and private sector information relating to the communications and digital sectors, indicator development, and assisting in statistical and broader research analysis, advice, and support.
