Biostatistician

College of Medical, Veterinary and Life Sciences
Research Institute of Health and Wellbeing

Ref: M00808

The Robertson Centre for Biostatistics is part of the Institute of Health and Wellbeing, within the College of Medical, Veterinary and Life Sciences (MVLS). It is internationally recognised as a centre of excellence for the design, conduct and analysis of major international multi-centre clinical trials, epidemiological studies and other research projects in conjunction with medical and biological researchers in the pharmaceutical industry, the National Health Service and other research partners. The Centre’s primary objective is to contribute to research projects that will improve the treatment of patients and the practice of medicine.

The Robertson Centre is currently seeking a Biostatistician with substantial experience of applying their statistical skills in medical research. The post is an excellent opportunity to work on major research projects with the support of senior colleagues, and to take a leading role in collaborative research projects, from the design stage, securing grant funding, through to final analysis and publication.

The Robertson Centre currently employs 70 people with expertise in biostatistics, data management, software development, health informatics, and project management. This is a well-established staff group, with many staff in post for over 10 years, and a fifth for more than 20 years. The successful candidate will be joining a committed and experienced team, with a strong track record in high-quality published research.

For further information or to arrange an informal discussion regarding the role, please contact Dr Alex McConnachie at Alex.McConnachie@glasgow.ac.uk.

This post is full time and has funding for 2 years in the first instance.
