Radius Health, Inc. is seeking a Statistician who is flexible and who can work well under pressure. The Statistician must have good working knowledge of clinical trial methodologies and regulatory requirement.

The incumbent will be alongside other programmers and statisticians within the company’s investigational drug abaloparatide-SC team. Currently, the investigational drug abaloparatide-SC is in Phase 3 development for the reduction of fracture risk in postmenopausal women with severe osteoporosis.

**Responsibilities:**
- Perform statistical activities, including writing statistical analysis plan and the supporting CSR writing and publications for abaloparatide studies and others as requested
- Implement statistical principles and clinical trial methodology
- Conversant with SAS programming, and detailed knowledge of SAS procedures and other statistical software
- To support regulatory submissions, a working knowledge of regulatory guidelines in relation to statistical analysis, study reports and statistical components of regulatory submissions
- Creating technical solutions that are imaginative, thorough, practicable and consistent with objectives

**Qualifications:**
- Master’s or equivalent degree in Biostatistics, Statistics, Epidemiology, Mathematics or related field
- 6+ years of pharmaceutical experience
- Technical abilities and skills in statistical methodologies using SAS, PASS and other statistical software
- Experience in NDA/MAA submissions
