Senior Statistician

Oxford, UK

Website University of Oxford

Department of Paediatrics, Oxford Vaccine Group

Senior Statistician (129603)

Grade 8 (£39,324-£46,924 per annum) Depending on experience, see job description

Full-time, fixed-term (4 years)

The Oxford Vaccine group is based within the Department of Paediatrics at the University of Oxford and carries out research of major national and international importance in the field of infection and immunology. We are seeking to appoint a highly motivated and experienced Biostatistician to support multiple studies including epidemiological surveillance programmes, immunological studies and clinical trials of vaccine effectiveness, with a prime focus on studies related to enteric fever being conducted in Africa and Asia. You will play a key role within the Oxford Vaccine Group contributing to the design and conduct of clinical trials and preparation of new clinical trial research proposals.

The ideal candidate will have PhD or post-graduate qualifications in statistics/epidemiology or equivalent supported by a strong publication record; an interest in clinical trials; and the communication, teamwork and time-management skills needed for working in large interdisciplinary teams on multiple projects.

We would prefer to make appointments at grade 8, however, in the event that no suitable grade 7 candidates come forwards, we also have flexibility to make an appointment at grade 7 (£31,076 – £38,183) with suitably adjusted responsibilities. Therefore, potential candidates are encouraged to apply even if they do not consider themselves to meet all inclusion criteria.

This is a full-time post offered for 4 years in the first instance.

For an informal discussion, please contact Katherine Theiss-Nyland (katherine.theiss-nyland@paediatrics.ox.ac.uk) or 01865 611400.

The closing date for applications is 12.00 noon on Tuesday 1 August.
