Biostatistician/Epidemiologist, Academic Medical Center (AMC)

Amsterdam, Netherlands

We are looking for an enthusiastic Biostatistician/Epidemiologist who will perform biostatistical and epidemiological analyses in the field of nephrology within an international context. The applicant will work on EURODOPPS – a large dataset including the clinical data of more than 25 thousand haemodialysis patients from 7 European countries participating in the global Dialysis Outcomes and Practice Patterns Study (DOPPS) (www.dopps.org).

DOPPS is aimed at extending survival and improving the quality of life of hemodialysis patients worldwide. Through its many publications it has contributed to the evidence base incorporated into clinical practice guidelines. The EURODOPPS data are collected and managed by DOPPS, but the ERA-EDTA Registry for dialysis patients and kidney transplant recipients (www.era-edta-reg.org) in the Academic Medical Center (AMC) in Amsterdam (The Netherlands) has received access to them.

Tasks will include the further processing of the data; participation in the development of research proposals for evaluation by the EURODOPPS supervisory committee; performing epidemiological and biostatistical analyses of the data, providing methodological advice to the other members of the team, supervising visiting researchers working on the data; and participation in the writing of scientific papers and grant applications.

Description

- A PhD in Biostatistics or Epidemiology.
- Excellent communication skills and a clear style of writing.
- Excellent oral and writing skills in the English language.
- Extensive experience in statistical testing and modelling, including advanced etiological modelling methods. This experience is shown from scientific publications in this area.
- Experience in the writing of research proposals.
- Experience in the use of SAS or STATA.
