Data Analyst – Financial Services

Edinburgh, Scotland

Let’s Talk About You

You want to Own Your Career. You’re serious about rising as far and as fast as your work and achievements can take you. And you’re ready to write the next chapter of your career story: a challenging and rewarding role as a Capco Junior or Senior Data Analyst.

A Word About Us

Capco – Forming the Future of Finance

Capco is a distinctly and positively different place to work. Still in the early stages of its launch, the Edinburgh location is a rare opportunity for employees to build, shape and influence the business utilising your entrepreneurial spirit with the backing of the global Capco community. As the only dedicated Financial Services consultancy firm in Scotland, the opportunity for growth is large, accessible and immediate as the demands of the industry are rapidly changing. Much more than consultants, we are active participants in the global financial services industry. Our passionate business and technology professionals enjoy a unique environment where they are actively encouraged to apply intellect, innovation, experience and teamwork. We are dedicated to fully supporting our world class clients as they respond to challenges and opportunities in: Banking, Capital Markets, Finance Risk & Compliance, Insurance and Wealth and Investment Management. Experience Capco for yourself at capco.com

Let’s Get Down To Business

Capco are looking for Data Professionals. This role offers the chance to advise and deliver change projects as part of a long-term strategic partnership with leading financial institutions. The nature of these roles offers long term deployments and the chance to experience varied business and technology strategic initiatives.

The role has an Information Management and visualisation focus and will entail collaborating with a variety of businesses, and all types of technology functions located primarily in Scotland.

Fitting that description, you will also need to be Supremely Personally Motivated to work in a team where clients become colleagues too.

Show Us What You’ve Got

It will be very useful if you have some or all of the following skills and experience:

- Experience working as a data architect, data analyst, or developer in a major information management technology
- Experience of working in a data focused environment within Financial Services or other regulated sector
- Full lifecycle experience of major change programmes, including requirements analysis, design, build, integration test, and migration
- Exposure to data quality, assurance and remediation programmes
- Proven delivery experience working in a project environment with different methodologies (including Agile/Waterfall)
- Business Case Development – proven project and modelling skills, to represent information in forms that enhance decision making and communications
- Alignment of process and data architectures in complex operating environments
- Best practice solutions and tools – ability to advise clients regarding process improvement initiatives. Candidates should be comfortable presenting complex solutions in clear and concise language
- Governance Models – ability to develop effective governance frameworks
- Excellent Communication and Stakeholder Management Skills – the ability to communicate to a variety of audiences across business function and level and tailor messages appropriately
- Ability to critically evaluate information gathered across multiple sources, reconcile variances and recommend proposals to senior management and key stakeholders.

Senior Data Analysts will have lead and managed teams in a similar environment

Professional experience is important. But it’s paramount you share our belief in disruptive innovation that puts clients ahead in a tough market. From Day One, your key skill will be to perceive new and better ways of doing things to give your clients an unfair advantage.

**Now Take The Next Step**

If you’re looking forward to progressing your career with us, then we’re looking forward to receiving your application.
