The Department of Veterans Affairs (VA) Informatics Special Fellowship is a core training program of the VA HSR&D Center for Health Information and Communication at the Indianapolis VAMC, a close partner of the Regenstrief Institute, Inc. and Indiana University School of Medicine.

The goal of the Indianapolis VA Medical Informatics fellowship training program is to prepare graduates for careers in medical informatics, with particular research skills in health information exchange, health care analytics, human-computer interaction, and patient-physician communication.

VA's Fellowship in Medical Informatics provide opportunities using VA's internationally recognized medical informatics infrastructure and our research faculty and campus partners to provide outstanding training opportunities and to contribute to the academic pursuit of medical informatics research, improvement of health care delivery, and VA HSR&D recruitment and retention of promising informatics investigators.

Fellowship Director
David Haggstrom, MD
David.Haggstrom@va.gov

Eligibility Requirements
- US citizen or permanent resident
- Completed clinical training terminal degree (including MD) or PhD in computer science, medical informatics, decision science, economics, behavioral research or related fields
- Demonstrate potential for medical informatics research
