It’s an exciting time to join the Data Science team as they focus on driving efficiencies across our Online Grocery operations, the fastest growing part of our retail business. Using cutting edge technologies, the Data Science team improve operational efficiency and help to serve our customers better. Reporting to the Data Science Team Leader, you will take ownership of regular reporting which is delivered across the online business. You will also support in building new, best in class reporting and analytical capability. We are looking to transform our MI & BI strategy and this role will be central to delivering this.

What you’ll be responsible for:

- Delivering MI & BI to analyse and improve efficiency
- Using MI & BI to measure performance within Online
- Supporting the Data Science team in constructing data driven solutions
- Advising on data driven decisions
- Using statistical and analytical techniques to measure and report on efficiency improvements developed by the Data Science team
- Working with other data teams within Asda in order to develop robust and consistent data sets.

About you:

- Ideally you will have a degree (or equivalent qualification / experience) in Maths, Statistics, Physics, Computer Science or Engineering (or similarly highly numerate subject) or work experience in a similar role
- You’ll have strong Excel skills and experience with creating and using MI/BI, using tools such as Tableau / PowerBI
• You’ll be comfortable working with large volumes of data, preferably using Alteryx
• You’ll have experience with databases particularly with SQL
• Able to perform statistical analysis and understand whether trends are statistically significant, you’ll be able to articulate complex information and explain technical data to a non-technical audience
• Strong communication skills are essential, along with a willingness to challenge the norm and manage key stakeholders at all levels
• Resilience is a must as is the ability to thrive in a fast paced, challenging environment and adapt to a changing priorities
• A basic understanding of programming principles is desirable and experience with R / Python would be beneficial although not essential

Your benefits:

You’ll receive an excellent benefits package which includes colleague discount, share save scheme and a competitive pension. We also like to share our success; after all you made it happen, so every eligible colleague is also part of the Asda bonus scheme. The development opportunities are endless and we’ll support you every step of the way throughout your career.
