**OVERALL ROLE PURPOSE:**

Responsible for expanding and optimizing data and data pipelines, as well as supporting all IT projects on data initiatives. Ensuring data delivery is consistent throughout all ongoing projects.

**KEY ACCOUNTABILITIES:**

- Create and maintain optimal data pipelines.
- Assemble data sets that meet functional / non-functional business requirements.
- Identify, design, and implement internal process improvements, for example:-
  - automating manual processes, optimizing data delivery, re-designing infrastructure for greater scalability, etc.
  - design, build, test and maintain data management systems, making sure they meet business requirements and user needs
  - deliver services that are automated, reliable and secure.
- Build the infrastructure required for optimal extraction, transformation, and loading of data from a wide variety of data sources.
- Build analytics tools that utilize the data pipeline to provide actionable insights into customer acquisition, operational efficiency and other key business performance metrics.
- Work with stakeholders including all relevant internal and external teams to assist with data-related technical issues and support their data infrastructure needs.
- Keep data separated and secure across all relevant boundaries.
- Create data tools that assist in the building of all relevant products and services.
• Constantly strive for greater functionality in all data systems.
• Recommend ways to improve data efficiency and reliability

ATTRIBUTES:
• Practical and demonstrable experience of data engineering
• Sound problem solving and decision making skills
• Have a natural aptitude for innovation and analytical thinking
• The ability to use your own initiative
• Excellent communication skills, written and verbal
• The ability to manage time and prioritise accordingly

TECHNICAL SKILLS:
• Visual Studio development(C#)
• Azure Data Lake
• Azure Data Factory
• Azure SQL and SQL Warehouse
• HDInsight and Spark
