Office for Statistics Regulation

Statistics Regulator

Based in London, Newport (south Wales) or Edinburgh

£47,400- £64,000 per annum

Here at the Office for Statistics Regulation, our primary focus is to enhance public confidence in the trustworthiness, quality and value of government statistics by setting the standards they must meet, upholding these standards, celebrating when the standards are upheld, and challenging publicly when they are not. We are champions of relevant statistics in a changing world.

As part of a small, enthusiastic team at the heart of the government statistical system, you will play a vital role in ensuring that statistics at the centre of policy and public debate have value (meaning they are relevant – addressing the key questions posed by society; responsive – to emerging challenges; coherent and accessible). As part of our regulatory services team, you will use your extensive analytical and research expertise along with strong inter-personal skills, to help to shape the future of official statistics by identifying opportunities for them to increase their public value.

With a background in statistics, economics, social research or regulation, you will be highly motivated with extensive experience of analysis and writing to high standards. You are a keen problem solver who analyses issues critically, identifies weaknesses and proposes effective solutions. You couple high-level research ability with strong communication, negotiation and influencing skills and are comfortable building and nurturing good relationships with stakeholders at all levels. Working as part of a team, you are able to produce excellent results that contribute to our objectives.

The Office for Statistics Regulation is an equal opportunities employer and welcomes diversity. All applicants will be considered on merit.
