Senior Statistician, Abbott Diabetes Care
Witney, UK

Senior Statistician
Abbott Diabetes Care
Oxfordshire, UK
Competitive, with excellent benefits package

Description

Are you a Statistician working in pharmaceutical, clinical or healthcare research?

Do you feel stuck in a role that has become limited and routine?

Do you want to use your skills and expertise in a fast-paced and customer-focused environment, where you will be making a difference to the lives of patients with diabetes around the world?

If the answer is yes, Abbott Diabetes Care in Oxfordshire would love to hear from you.

Abbott Diabetes Care designs, develops and manufactures leading-edge glucose monitoring systems and test strips for use in both home and hospital settings. We have a Global Centre of Excellence for Medical Devices based in Witney, Oxfordshire. The site has been instrumental in the research, development and manufacture of the next generation FreeStyle Libre Flash Glucose Monitoring System, launched in September 2014.

Building on the successful launch of this latest product, we now have an exciting permanent opportunity for a Senior Statistician II to join our R&D team on site in Witney.

Your main role will be to provide lead statistical support and expertise for clinical studies, with your typical responsibility being for 4 to 5 studies per year. Your work will be varied and will include studies for product approval, reimbursement, and on-market support.

This opportunity may particularly interest someone in a Pharmaceutical, CRO, medical research or academic environment who is looking for a broader and more varied role. *The pace of product development is faster in medical devices, and you will need to apply yourself to a variety of new situations and handle a variety of sources of data.*

Specific duties will include:

- Providing significant statistical expertise across all stages of the clinical lifecycle, from planning and study design, to ongoing study management, final reporting and submission for publication;
- Liaising with CROs on outsourced projects;
• Providing statistical expertise and consultancy to colleagues in R&D and across the wider business when required;
• Contributing to Health Economics and Outcomes Research (HEOR) projects;
• Supervising junior members of the team, and presenting updates and results to colleagues and senior managers.

The role will involve collaborating with a number of different people and departments across the business, and so it is expected that you will be based on site in Witney on a full-time basis.

Qualifications

As you will be working on novel technologies, you will need to be able to demonstrate that you are an adaptable, solutions-focused Statistician who can apply existing knowledge to new challenges.

You will need excellent written and verbal communication skills and team-working skills in addition to your detailed knowledge of statistical methods and data analysis, with the ability to communicate results to both technical and non-technical colleagues.

You must also have an organised approach to your work, with excellent attention to detail skills, and the demonstrated ability to plan your time to ensure that all project deadlines are met.

You must have at least a BSc in Mathematics or Statistics, and relevant experience in a Clinical Stats role.

In addition to a competitive salary, Abbott offers a highly attractive benefits package which includes an excellent pension scheme, share ownership scheme, private healthcare and life assurance, and a flexible benefits scheme which you can tailor to your own requirements.
