

The Cancer Genomics Cloud: A secure and scalable cloud-based platform to access, share, and analyze multi-omics datasets

Kicking off the class, we will give an overview of the CGC, what types of data you can freely access, the tools available on the platform, and how to share data and results securely in the cloud. In this class, you will learn how to login to your CGC account, create a project, and start setting up an RNA-seq workflow. You will learn how to load data into your project and perform batch analysis on the cloud.
